Professional Summary

Full-Stack Engineer and Systems Architect with a strong foundation in high-volume supply chain operations and HR data management. Proven ability to translate complex operational bottlenecks into elegant, scalable software solutions. Expertise in building tracking applications, designing database architectures, and automating enterprise systems using React, Node.js, PostgreSQL, AppSheet, and advanced SQL methodologies.

Technical Skills

- **Frontend Engineering:** React, Next.js, Tailwind CSS, Framer Motion, Responsive UI/UX
- **Backend & Databases:** Node.js, Express, PostgreSQL, SQL Scripting, REST APIs
- **Data & Systems Integration:** AppSheet, Advanced Google Sheets (QUERY, FILTER, VLOOKUP), LLM/Gemini Integration
- **Operational Management:** HR Workflow Automation, Digital Roster Systems, Logistics Tracking, Inventory Reconciliation

Professional Experience

HR Helpdesk & Data Systems Specialist | *Flipkart STV (Mother Hub)* | Feb 2026 – Present

- Engineered a custom, search-enabled overtime and attendance tracking application using AppSheet, establishing seamless bidirectional synchronization with internal Google Sheets databases.
- Managed and audited digital employee rosters for high-volume operational units, executing SQL-style logic to automatically identify and resolve shift timing conflicts and transport status errors.

- Facilitated the onboarding, work-slot selection, and cross-functional administrative support for warehouse logistics, significantly reducing manual HR overhead through system automation.

System Supervisor | *Xpressbees Logistics Solution* | Dec 2024 – Jan 2026

- Supervised system-level warehouse operations and workflow routing, optimizing inbound and outbound data accuracy across the logistics network.
- Monitored real-time operational dashboards to troubleshoot system anomalies, ensuring seamless coordination between the physical warehouse floor and digital tracking platforms.

Stock Manager | *Opus Apperities* | June 2023 – Nov 2023

- Directed inventory management protocols, utilizing digital tracking tools to maintain optimal stock levels and reconcile physical inventory with database records.
- Streamlined supply chain coordination, minimizing stock discrepancies and improving order fulfillment metrics.

Engineering Intern | *Farmson Solar* | Ahmedabad, Gujarat | Feb 2021 – June 2021

- Leveraged B.Tech engineering background to assist in the operational planning and technical documentation of renewable energy projects.
- Supported on-site operations and data collection to ensure compliance with project specifications.

Selected Projects

Interactive AI Engineering Portfolio *Tech Stack: React, Next.js, Node.js, PostgreSQL, Tailwind, Framer Motion*

- Architected and deployed a decoupled, enterprise-grade web application utilizing Vercel for the frontend and a Render-hosted custom API for the backend.
- Integrated Google's Gemini AI SDK into the Node.js backend to create a context-aware, memory-enabled interactive conversational agent for recruiters.
- Developed a simulated "Command Line Interface" allowing users to execute live PostgreSQL-style queries to dynamically render frontend data, visually demonstrating backend database capabilities.

Education & Certifications

B.Tech in Renewable Energy and Environmental Engineering | *SD Agriculture University, Dantiwada*

- *Graduated: 2021 | CGPA: 7.32*

State-Level Professional Preparation | *Gujarat Online Job Application System*

- Actively pursued and prepared for rigorous state-level professional roles, including Revenue Talati Class-III and Assistant Environment Engineer Class-2.
- Developed strong analytical, administrative, and regulatory comprehension skills (including an understanding of the Land Acquisition Act) through intensive competitive examination preparation.
